01 RELEVANT EXPERIENCE

2022 — present
OVHcloud

Site Reliability Engineer — Baremetal

Operate and improve production infrastructure while helping teams make delivery safer, observable, and repeatable.

- Participate in incident response and on-call rotation; investigate production issues and implement preventive improvements.
- Maintain containerized microservices with Docker, Kubernetes, and Arsenal; monitor performance with Nagios and Prometheus.
- Manage infrastructure as code with Puppet and secrets-management tooling to streamline secure deployments.
- Contribute to CI/CD change management with OVH CDS, automating build, test, and deployment workflows.
- Write knowledge-base articles and operational documentation for tools, processes, and team handoffs.

2020 — 2022
OVHcloud

Associate Systems Engineer

Supported order-funnel systems and designed automations that reduced repetitive operational work.

- Supported order-funnel environments through billing APIs, container-stack monitoring, and operational dashboards.
- Built Go, Perl, and Bash automation scripts for day-to-day operations and release-adjacent work.
- Led Zuora Workflow projects: requirements, stakeholders, production-release planning, operations analysis, and support.
- Designed and maintained bill-run automation to improve reliability, productivity, and execution time.

03 TOOLBOX

Delivery & automation

CI/CD · OVH CDS · Bash · Git / Stash · Puppet · Docker · Kubernetes

Systems & signals

REST APIs · JSON · Prometheus · Nagios · Graylog · Linux administration

Development workflow

JavaScript · Python · Go · Perl · SQL · Playwright · AI-assisted development

Collaboration

Jira · Confluence · ServiceNow · cross-functional release coordination
